

About RAMS

RAMS is a fully digital rack management software, where you can monitor the safety of your racks anytime, anywhere. It provides you with a real-time tracking and monitoring portal for your pallet racking inspections, damage or repairs, and optimizes the overall safety of your warehouse easily and efficiently. With RAMS, you can say goodbye to manual processes and embrace a digital solution that simplifies and automates your rack management tasks. It offers a user-friendly interface that allows you to easily navigate through different features and functionalities. From conducting routine inspections to identifying and addressing damages, RAMS streamlines the entire process, ensuring nothing slips through the cracks.

By implementing RAMS, you can optimize your warehouse operations, reduce costs associated with rack repairs and replacements, and improve overall workplace safety. Experience the power of RAMS and take your warehouse management to new heights, confidently knowing that your racks are monitored and your workforce is protected.

Risk Prediction

Upgraded Safety

Cloud-Based Platform

Cloud Based Platform

RAMS is a cloud-based platform that offers an interactive dashboard for users to access and manage rack safety. It provides real-time data synchronization, centralized storage, and convenient accessibility. Users can monitor real-time rack health and leverage analytics to make data-driven decisions for optimizing rack safety and improving warehouse operations.

Android Based Platform

RAMS offers an Android-based platform for inspectors to conduct offline inspections. The app allows inspectors to perform inspections and capture data without an internet connection. Once online, the data is synced with the cloud-based RAMS platform for seamless updates and data integrity. This feature provides flexibility and efficiency for inspectors in various environments.
